

# New Era in Air Handling Units...

FLEXLINE

NEW

QUICKLINE

NEW

- ▶ Non-thermal bridge
- ▶ High body resistance
- ▶ 50 mm rock wool tilled panels
- ▶ Sealed body and filters

Flexline & Quickline are the advanced designs of SL with proven superiority. They are two different lines of air handling units, both of which use the same body structure. It offers 18 FLEXLINE models and 7 QUICKLINE models to be used with various airflows and 27 different types of FLEXLINE and 14 different types of QUICKLINE conditioning sections for each model. These devices are able to perform all inside air conditioning operations effectively regardless of the operating conditions due to their advanced thermal and mechanical performance.

For Quickline, delivery terms is considerably short since intermediate products are being held in stocks. It allows giving orders during further stages of investment. Thereby, it provides the investor with financial facilities. Its panels are interchangeable, it allows all kinds of directional changes on site.

Accurate selection of capacity for all kinds of air conditioning processes through AIRWARE software
